INTRODUCTION

Food is the most basic of all needs. In a country with vast agricultural resources, it may seem surprising that any family faces hunger. Yet access to affordable, high-quality, healthy food continues to be a challenge for many. No community is immune to this problem; there are individuals in every county of the U.S. who intermittently or frequently do not have enough food to eat.

The Burden of Food Insecurity

The cost of moving from food insecurity to security provides insight into how thin the line is between financial hardship and stability. In 2016, the total shortfall for all U.S. families in meeting their basic needs was just over \$21 billion, which, when spread across all food insecure Americans, was \$41 per month per household, according to Feeding America.² This budget shortfall means that families are forced to make difficult decisions, like choosing between food or paying for utilities or a needed prescription. And this burden extends beyond individual households: The U.S. spent an estimated \$160 billion on health care costs related to hunger and food insecurity in 2014.³

FOOD INSECURITY DEFINED

The U.S. Department of Agriculture (USDA) defines food insecurity as the lack of access, at times, to enough food for an active, healthy life for all household members, and limited or uncertain availability of nutritionally adequate foods.¹

A large number of households experience food insecurity. At some point during 2017, 12 percent of U.S. households were food insecure, including 16 percent of households with children.⁴ The prevalence of food insecurity varies by region and state, ranging from 13 percent in the South, to 10 percent in the Northeast; and from 7 percent in Hawaii to 18 percent in New Mexico.⁵

Having enough food is a basic challenge for ALICE and poverty-level households. The figure below shows the gap between how much ALICE families need for food and what they can afford to spend, comparing three different monthly food budgets for a family of four to the monthly salary of a full-time employee working as a packer.⁶ In the U.S., there were 693,170 packers, working at an average hourly wage of \$11.27, or \$22,540 annually (if full time, year-round) in 2017. Using the USDA's most meager estimate, the Thrifty Food Plan, food for a family of four accounts for more than 30 percent of a packer's salary. Using the original FPL, food costs the family one-third of a budget, which in this case is 36 percent of a packer's income. And using the Consumer Expenditure Survey, which reflects actual spending, food costs 38 percent of an ALICE family's expenses.⁷
